

Post-doc position at CHUV, Lausanne

We offer:

The laboratory of Catecholamines and Peptides of the CHUV (Lausanne) offers a one-year post-doc position, starting mid-2019. The post-doc will take part in a collaborative project with endocrinologists from Inselspital (Bern). The project aims at developing and validating LC-MS/MS assays for several endogenous peptides in plasma involved in diabetes and obesity, to be used in a clinical environment.

Our laboratory is specialized in biomarkers (bioamines, peptides) with a special interest in neuroendocrine tumors. This position will provide strong knowledge in biomarker quantification using sensitive chromatographic and mass spectrometric instrumentation.

Your profile:

PhD in analytical chemistry or similar, strong knowledge in mass spectrometry and interest for clinical sciences. Project management skills mandatory. Fluency in English.
