# Automation in Analytical Chemistry

# Hardware

# Screening

## High-throughput screening

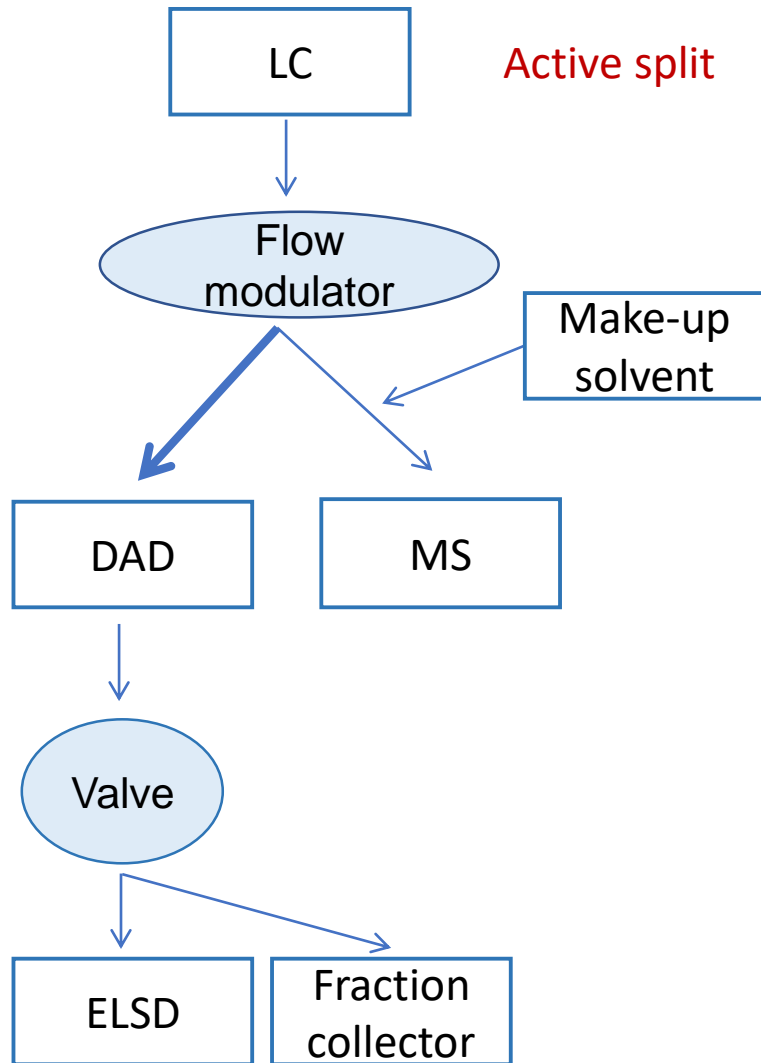

- Fast and accurate
- Robust analytical methods
- Wide range of detection for diverse molecules
- Price

➔ 2 LC systems, 1 GC

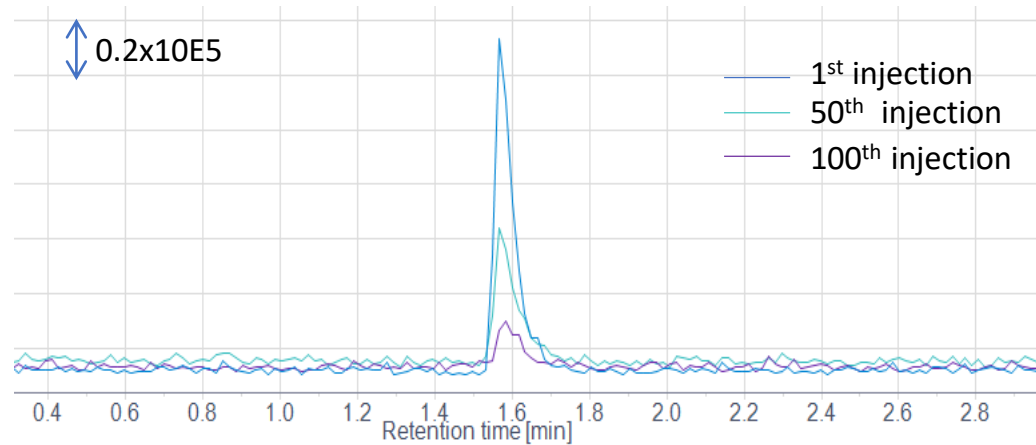

➔ Kits of 4 columns

➔ 3 detectors ? setup ?

# Screening

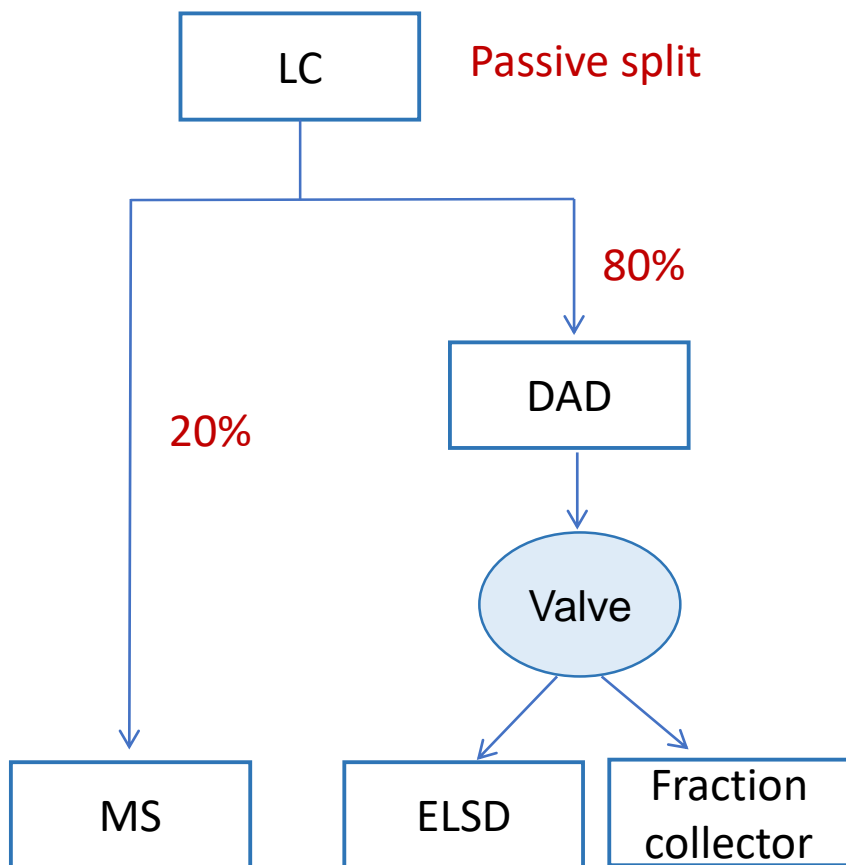

- ✗ MS signal ↓ , S/N ↑
- ✗ Leaking
- ✗ Solvent consumption

Mass spectrum of Flurbiprofen 10mM with flow modulator

Conditions:  
A: H<sub>2</sub>O 0.05% acetic acid  
B: ACN 0.05% acetic acid  
Isocratic 70% B : 30% A  
Flowrate: 1mL/min  
Vinjection: 1μL

# Screening

- ✓ MS signal, S/N
- ✓ Leaking
- ✓ Solvent consumption

Conditions:  
A: H<sub>2</sub>O 0.05% acetic acid  
B: ACN 0.05% acetic acid  
Isocratic 70% B : 30% A  
Flowrate: 1mL/min  
Vinjection: 1uL

Mass spectrum of Flurbiprofen 10mM obtained by passive split

# Sample preparation

- One sample plate is transferred through all workflow
- Sample plate quality and security during transportation
- Adaption to all methods/ instruments (size, volume, concentration, solvent, etc.)
- Automation of many preparation steps
- Combination of all steps in one platform

For example:

+ FTIR (10-20mM), UV (0.05mM)

+ Deuterated solvent for NMR and normal solvent for FTIR and HR-UV

+ Low concentration sample collected from LC  $\rightarrow$  SFC

# Sample preparation

-QR labelling

Centrifuge

Sealing

Stock

- 2 Agilent Bravo systems

- Building some accessories/materials if needed
- Hood installation for the volatile solvents

# Characterization

- 1 semi prepLC

- 1 NMR 400 MHz

04/10/2024

- 1 HR UV

1FTIR

- 1 SFC-IM-QTOF

## Multidimension characterization

- Liquid flow transfer (flowrate, pression, etc.)
- Washing flow cells
- Different concentrations and solvent
- Automation of analytical instrument
- IM-QTOF automation (calibration, tuning, data processing)

# Characterization

- OMNIFIRE

- Automated sample preparation for characterization
- Connected to the output of prepLC, collecting and splitting the outgoing flow into 96-well plates
- Transferring liquid samples to UV and IR flow cells and washing by nitrogen gas
- Transferring liquid samples to an NMR sample tube and sealing.

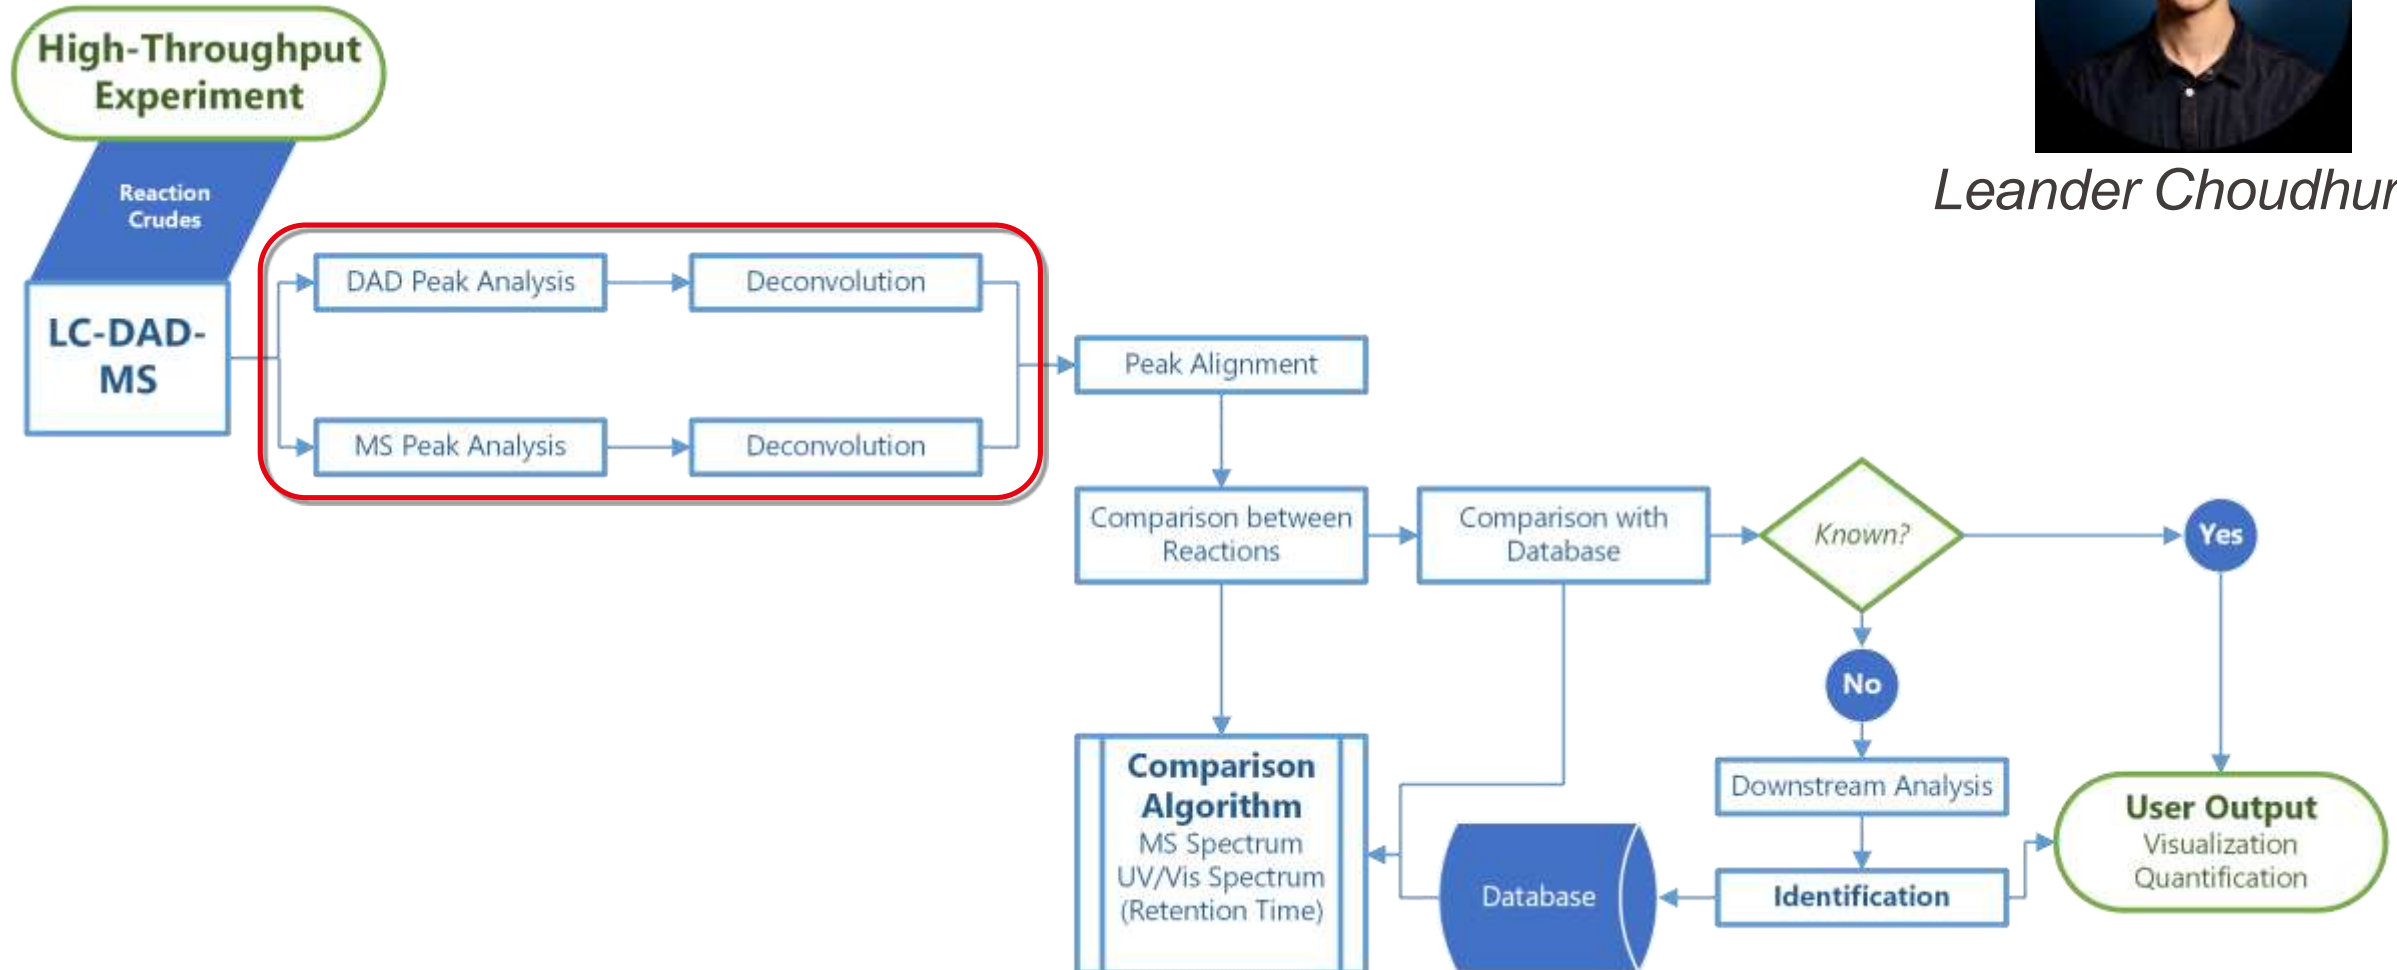

# Software

- Same data format exported for all (CSV, ASM, JCAMP) ☐ not possible
- The complexity of management for the different formats ☐ data processing
- Complicated control for some instruments, unavailable or limited API
- Software are often proprietary
- Adaptation to each software

# Sample Selection Algorithm

Leander Choudhury

# Challenges and perspectives

- Peak quality and data resolution

❑ Deconvolution

❑ False negative/false positive

- Include ELSD
- Communicating with lab scheduler & prep. LC
